Software engineer with 3 years of experience in .NET, SQL Server, and BizTalk-driven backend development, with hands-on ownership of HIPAA-compliant EDI healthcare tooling, Agile/Scrum delivery, legacy system modernization, and enterprise integration. Also design and build AI/LLM-powered automation, including agentic workflows currently in active development for incident response.

EXPERIENCE

Infinite Computer Solutions	Associate Software Engineer, Chennai	May 2024 – Present
- Engineered and deployed the Zyter-MCG in-house EDI healthcare processing tool that processes 60,000+ healthcare claims daily, replacing a legacy TIBCO platform, using .NET, ASP.NET MVC, SQL Server, Tidal automation, BizTalk Server, HTML, CSS, and JavaScript. - Developed and integrated the BizTalk Server component of the EDI pipeline to process HIPAA EDI transactions (834, 835, 837, 824), conducting peer code reviews and unit testing to ensure reliable enterprise system integration and compliance. - Adapted the project approach mid-development in response to a major scope change, coordinating updates across multiple client applications with cross-functional QA and business teams through Agile/Scrum sprints and Git-based source control while keeping delivery on schedule. - Led the migration of 20 applications from legacy .NET Framework 4.2 to .NET 8, applying OOP, SOLID principles, and design patterns to improve performance, maintainability, and long-term supportability. - Delivered production support and incident troubleshooting for mission-critical healthcare applications, performing root cause analysis and SQL Server stored-procedure/query optimization; recognized with multiple Employee of the Month awards and client appreciation for high-quality, reliable solutions. - Architected AI agents using LLM APIs, FastAPI, and Python to automate production issue analysis, ticket validation, duplicate detection, and noise filtering, applying embedding-based retrieval to support intelligent decision-making workflows and reduce manual triage effort for on-call engineers.		

PERSONAL PROJECTS

Independent work outside of professional engagements.

Employee Management System	 C#, ASP.NET, SQL Server	2025
Built an automated employee/employer management system in C# and ASP.NET, with SQL Server backing the data layer, including an analysis layer that summarizes each request so approvers can decide faster without manual review.		
Jarvis: Personal AI Assistant	 Python, SQL	2026
Developed a Python-based personal assistant with a SQL-backed command-handling system that responds to voice/text commands for everyday tasks — playing music, checking the time, setting reminders, and booking cabs — with a flexible foundation for new integrations.		
Plant Disease Detection System	 Python, TensorFlow/Keras, OpenCV	2026
Trained a deep learning classifier using TensorFlow/Keras and OpenCV image-preprocessing to identify plant diseases from leaf images and suggest possible treatments, improving accuracy on real-world images.		

TECHNICAL SKILLS

Languages: C#, JavaScript, Python, SQL, HTML5, CSS3
Backend & APIs: .NET Framework, .NET 8, ASP.NET MVC, REST APIs, Web API, FastAPI
AI & Data: LLM APIs, Prompt Engineering, Embedding-Based Retrieval, TensorFlow/Keras, OpenCV
Databases: Microsoft SQL Server, Stored Procedures, Query Optimization
Integration & Middleware: BizTalk Server, Tidal Automation, HIPAA EDI (834, 835, 837, 824), third-party system integration
Tools & Workflow: Git/GitHub, Visual Studio, CI/CD pipelines, Postman
Practices: Agile/Scrum, unit testing, peer code review, technical documentation, OOP, SOLID principles, Design Patterns, Dependency Injection, Middleware

EDUCATION

Malla Reddy College of Engineering & Technology, Hyderabad	 B.Tech, Computer Science	March 2020 – March 2024
---	-----------------------------------	--------------------------------

CERTIFICATIONS

- Big Data Analytics — June 2023
- Python Data Structures — June 2022
- MySQL Tools and Linux Commands — June 2023
